## AGRICULTURE IRRIGATION & WATER SOLUTIONS

Every irrigated farm enterprise requires systems to produce the best commercial outcomes in terms of crop or pasture yields. Your local Think Water store has many years of industry experience and knowledge, which in combination with our Preferred Suppliers can provide you with solutions to your irrigation challenges.

Typical irrigation systems will include a pump system for water delivery. Pumping systems can be quite complex, and depending on your requirements, may include different drive types from diesel to electric and may also include variable speed drives and control systems. Solar pumping is not just a solution for remote areas where electricity connections are uneconomic. More and more farmers are replacing the iconic windmill with solar. We have turn-key solutions for every farm type, conditions and environment.

## LANDSCAPE, COMMERCIAL & TURF IRRIGATION

Think Water stores design, supply, install and maintain commercial irrigation projects, from golf course irrigation, council sports ovals, racetracks, hockey fields and landscape irrigation around commercial buildings, to estates and housing developments.

Irrigation projects can also involve pumping design elements. Building a water and energy efficient system is a mix of both design and key product selection which results in a reduction in lifetime operational costs of the system. These savings can be significant and help off set the capital costs involved. Installation may also involve the use of recycled water, which is a more and more common practice where a reliable source of recycled water is available

- Sprinkler & Sprayers
- Pumping & Filtration
- Water Storage
- Smart Irrigation Controllers
- Trenching Services

## FILTRATION & WATER TREATMENT

Water quality is critical, not only for domestic use around your home but also for commercial applications such as sports turf, food and beverage, council gardens and agriculture.

The degree of treatment and filtration will depend on the specific application, standards that need to be met and the water source available.

Think Water provide the right solutions and design for many applications and needs, which include:

- Mains and rain water filtration systems
- Tank water filtration
- Rural home filtration systems
- Bore water filtration systems
- Waste water and grey water treatment
- Agriculture water filtration
- Landscape & commercial water filtration

## RESIDENTIAL IRRIGATION SYSTEMS

Irrigating your home's outdoor environment improves liveability which creates an inviting space for you and your family to relax and enjoy.

Great landscape needs great irrigation. By planning what you need to support your significant investment in garden plants and lawn, you will ensure outstanding results that allow your plants to flourish.

Think Water specialise in the design, supply and installation of the most efficient home irrigation and water systems allowing you to enjoy your home landscape while conserving our planet's greatest asset. Knowing what sprinklers to use, adjusting the sprinkler head arc and pressure as well as using a WIFI controller and drip irrigation for your garden beds helps maintain your outdoor lifestyle without compromising water usage.

### What can we offer?

- Garden sprinkler systems
- Home drip irrigation
- Smart irrigation controllers
- Pressure boosting pumping systems
- Under-sink or whole-house filtration systems

## RAINWATER HARVESTING & BORE WATER STORAGE

The harvesting of rainwater simply involves collecting of water from surfaces on which rain falls and storing this water for later use. Normally water is collected from the roofs of buildings and stored in rainwater tanks. Typical uses for recycled water might be for your toilets and laundry, garden, stock water, etc.

Reducing your dependence on mains water not only saves money, but also lessens the impact on the environment and will help you in the future should there be any water restrictions in your state or region.

## FIRE PROTECTION

The threat from fires can strike at any time, particularly in regional areas during summer when the impact of bushfires can be devastating on people, property and communities.

Preparing in advance for these events is a key factor in mitigating the risk of bushfire. Think Water specialise in the supply and installation of fire protection systems:

- Firefighting diesel and petrol pumps
- Firefighting hoses, reels, nozzles and accessories
- Fire mitigation products
- Steel tanks
- Whole of house/ property design
